

# TAKE OFF WITH GAIN DAO CRYPTO POOLS

**GAINDAO**  
HYBRID FINANCE

## + CRYPTO POOLS

### AVERAGING 3-6% MONTHLY RETURNS\*

**Gain DAO** is a series of tokenized, crypto-denominated Pools, which are actively traded by community elected Pool Managers. Pool Managers deploy advanced trading technologies to grow the Pools by an average of 3-6% monthly\*. Anyone can join a Pool by purchasing the corresponding native token associated with the Pool.

### ETHER POOL

This Pool is a collection of Ether denominated accounts, held with regulated brokers, and audited daily by a third party.

### HARVESTING FUNCTIONS

Facilitates the conversion of GAIN to Ether, without affecting the price of GAIN on the open market or incurring slippage. All harvested GAIN tokens are burned, creating strong deflationary pressure.

NATIVE  
TOKEN: **GAIN**

TOKEN  
TYPE: **Utility/Governance**

MAX  
SUPPLY: **42,000,000**

FULL-  
RESERVE: **GAIN** tokens can only enter circulation by first being exchanged for Ether via the Distribution Contract. This ensures GAIN maintains its status as a true, full reserve token.

HARVESTING: **GAIN** tokens can be swapped for a proportionate amount of Ether in the Pool via a monthly process called **Harvesting**.

# + TOKENOMICS

## ATTRIBUTES

All <b>GAIN</b> tokens to ever exist are held in an audited Distribution Contract	Tokens are only released when they are exchanged for Ether	100% of the Ether collected from the Distribution Contract is sent to the Ether Pool	This distribution occurs in a linear fashion from 3000 <b>GAIN</b> per Ether to 1 <b>GAIN</b> per Ether.
---	--	--	--

## ROUNDS

<b>SEED ROUND</b>	1% of total supply at 3,000 GAIN per Ether.
<b>PRIVATE SALE</b>	Capped at 20% of total supply. Rate between 2,900 GAIN per Ether and 2,400 GAIN per Ether.
<b>PUBLIC SALE</b>	Linear progression of GAIN tokens sold from 2,400 GAIN per Ether to 1 GAIN per 1 Ether.

# + GAIN VALUE PROPOSITION

### Pool Managers

Pool Managers are tasked with growing the Pools through algorithmic trading in various financial markets, increasing the redeemable rate of GAIN tokens.

### Harvesting Token Burn

GAIN token holders have the option to Harvest their GAIN tokens for Ether at the end of each month. This process burns 100% of the GAIN tokens harvested. This benefits the token holders who do not Harvest, by reducing the redeemable GAIN tokens through deflation.

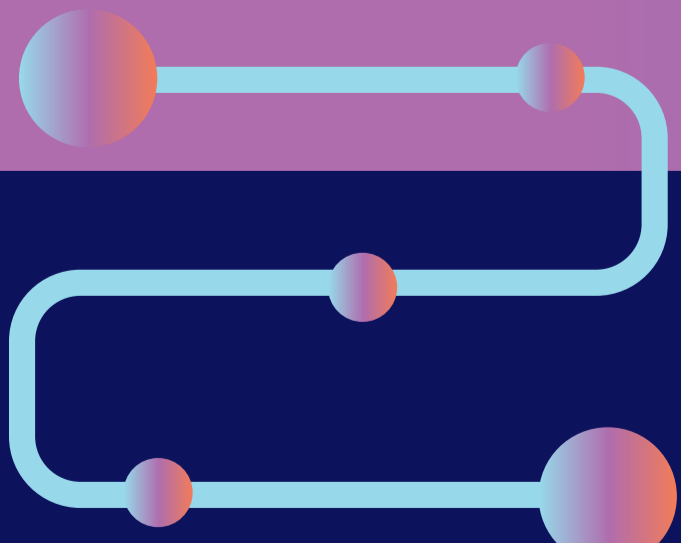

### New pool participants

As the Pools fill, the value per GAIN token increases in a linear fashion from 3000 GAIN per 1 Ether to a 1:1 ratio. Every new participant joining the Pool pays a less attractive rate than the previous person, creating a positive impact on the redeemable rate of GAIN.

### AUDITED AND TRANSPARENT

- **ALL GAIN DAO CONTRACTS AUDITED**
- **POOL MANAGERS TRADING HISTORY AUDITED AND VERIFIED (BETA, ETHER POOL)**
- **GAIN DAO TEAM MEMBERS FULLY DOXXED**

### ROADMAP

>>> LAUNCH NEW POOLS WITH DIFFERENT BASE ASSETS; I.E. BITCOIN AND DAI >>> ONBOARD QUALIFIED POOL MANAGERS
